| <p><b>❸</b> After completing two service bulletins on the B737 control modules, we now have flickering fault lights at times during testing, as well as removals from the aircraft for flickering fault lights. To date, Alpha Avionics has not provided any help except to acknowledge that they are aware of the problem.</p> <p>Have any other airlines determined the cause and come up with a fix for this?</p> <p>Other operator and vendor comments, please.</p>   |  |   |                                       |          |                          |                                  |   |   |  |                                   |   |                                      |   |                                       |  |  |   |                                 |                                       |   |                                       |                                   |   |   |   |  |
